

Electro Optic Systems

Company Overview

Electro Optic Systems (EOS) is a high-tech company operating in defence, space and communications domains. We have designed, manufactured and exported advanced technology systems for nearly 40 years. Our core capabilities are in space information and intelligence services, optical, microwave and on-the-move satellite products, optical sensor units, remote weapon systems, high energy laser weapons, turrets, Counter-UAS (C-UAS) and UGV lethality.

Products

Defence Systems

- Precision remote weapon stations (RWS):
 - **R150S:** Ultra-lightweight, stabilised, 12.7 mm/.50 Cal MG capable
 - **R400S:** Lightweight, 30x113mm cannon capable with coaxial MG and 2 x missiles
 - **R600S:** Mid-weight, 30x113mm cannon +MG capable, multiple missile options
 - **R800S:** Heavyweight, 30x173mm cannon +MG capable, multiple missile options
- **SLINGER:** Lightweight C-UAS lethality incorporating a radar, a 30mm cannon with specialised ammunition, and EOS proprietary stabilisation and pointing technology
- **TITANIS:** Layered drone defeat. Fully integrated C-UAS system with soft, hard and high energy laser kill capabilities
- High energy laser weapon systems
- **C4 EDGE:** battlegroup and below battle management and communications system

Space Systems

- Supply of space object data through Data-as-a-service (DaaS) based on EOS' network of ground-based Electro-optical sensors that are:
 - Wide and narrow field
 - Operate both daytime and night-time
 - Span LEO to Cis-Lunar
 - Capable of detecting the very small and dim space objects
- A catalogue of over 20,000 space objects which can easily be integrated with other government and commercial sources for comprehensive space awareness
- Directed energy applications for the Space Domain, with EOS being a long-time specialist in Satellite Laser Ranging (SLR) technologies
- Mirror manufacture and optical chain design for space observation, specialising in large aperture optics (up to 1m)
- Telescope manufacture and observatory construction in 1m and 2m classes for wide and narrow field Electro-optic systems
- EM Solutions: stabilised satellite on the move terminals

Discriminators

Defence

- Heavy calibre firepower on lightweight weapon systems
- Class leading precision and accuracy from machine guns through to cannons
- Robust, compact, integrated, surveillance grade sensor packages
- Common user interface across the weapon system range, minimising operator training requirements
- Complete vertically integrated design with all IP owned by EOS, long-term obsolescence management
- Innovative and adaptable and highly experienced engineering team

Space

- Collaborating with other electro-optic, radar and RF sensors to enhance and strengthen existing space domain awareness capabilities
- Sharing arrangements for space data and infrastructure
- International integration of sites to enable cross-border sensor tasking to track priority space objects

Availability and Support

Defence

- Deliveries commence 12 months after contract signature depending on customer requirement.
- EOS maintains a global support network with service centres in Australia, United States, Middle East and Asia. Customers are provided access to world class trainers and field support staff, bolstered by a fully developed suite of training and simulation systems.

Space

- Products are available now as operational space capabilities.
- EOS has physical business locations in Australia, New Zealand and the United States.

Key Customers

Australian Army, South East and North Asia and Middle East nations, various NATO countries, national space agencies, Defence and other Government agencies, commercial operators of spacecrafts and research organisations

Key Partnerships (Suppliers)

- Diehl Defence, Hanwha Defense Systems, Rheinmetall Defence Australia, Northrop Grumman, Thales Australia. EOS' supply chain is predominantly across Australia and New Zealand. We are interested in forming relationships with suppliers with capabilities in high power lasers and unique mirror coating technology

Quality Accreditations and Awards

- ISO 9000:2015
- Space Industry Awards:
 - Business of the Year – Large 2020, 2021 & 2022
 - Defence Business of the Year 2022
 - Manufacturer Business of the Year 2022
 - Engineer of the Year – 2020 & 2022
 - Scientist of the Year – 2020
- Australian Defence Industry Awards:
 - Export Business of the Year – 2020, 2021 & 2022
 - Scientist of the Year – 2020
 - Manufacturer of the Year – 2021
 - Space Business of the Year – 2021
 - AIC Champion of the Year 2022
